Cubes and Cubigami: puzzles and solutions

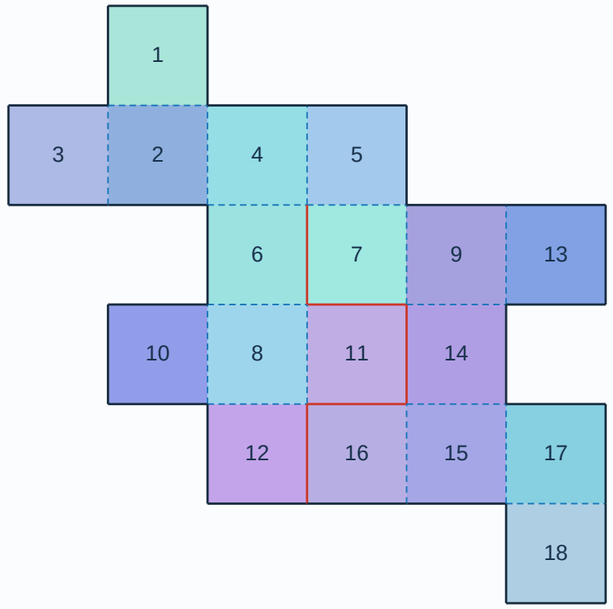

One through eight cubes | 35 fixed-cut nets | 796 net-target challenges

One net. Many possible shapes.

Part I - Puzzles. Fold each cool-colored net into its warm-colored targets. The target colors are independently randomized and give no panel-matching key.

Part II - Solutions. The identical nets and target lists, now with matching panel colors.

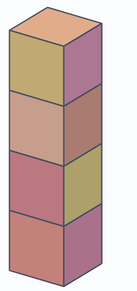

This collection includes all 11 single-cube nets, the classic seven-shape four-cube outline, a published 23-shape five-cube net, and larger examples through eight cubes. The 241-target eight-cube net is a useful challenge set; it is not claimed universal.

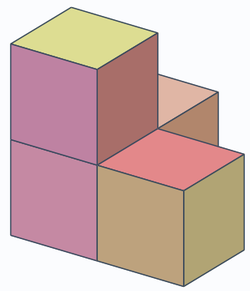

C4A - the classic Cubigami7 outline

This adaptation fixes a tree of hinges and internal slits. It does not reproduce the commercial hinge mechanism exactly.

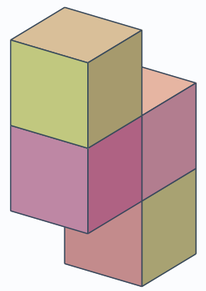

Across the collection, every planar tree-shaped cube cluster through eight is represented. Spatial coverage is partial at six, seven and eight. A shape can occur under more than one net. All cubes have unit edges; each n-cube target has 4n+2 exterior squares.

C4-001

C4-004

C4-007

Cut solid black and red lines. Fold blue dashed hinges. No tabs or thickness allowances are included. The checks certify folded end states, not collision-free assembly.

C8E 8 cubes / 2 targets	56	111
C8F 8 cubes / 1 target	57	112

How to use the collection page 3

Checks, coverage and sources page 113

C4A is the classic seven-shape set. C5A is the published 23-shape set. C8A and C8B have 241 and 237 targets. The remaining alternatives add different shapes and layouts.

Part I - Puzzles

Independent target colors hide the solution.

1 cube 11 nets; 1 distinct targets represented / 1 tree shapes. All 1 planar tree shapes represented.

2 cubes 2 nets; 1 distinct targets represented / 1 tree shapes. All 1 planar tree shapes represented.

3 cubes 2 nets; 2 distinct targets represented / 2 tree shapes. All 2 planar tree shapes represented.

4 cubes 2 nets; 7 distinct targets represented / 7 tree shapes. All 4 planar tree shapes represented.

5 cubes 4 nets; 27 distinct targets represented / 27 tree shapes. All 11 planar tree shapes represented.

6 cubes 4 nets; 36 distinct targets represented / 138 tree shapes. All 27 planar tree shapes represented.

7 cubes 4 nets; 86 distinct targets represented / 822 tree shapes. All 83 planar tree shapes represented.

8 cubes 6 nets; 265 distinct targets represented / 5154 tree shapes. All 255 planar tree shapes represented.

Choose one net and work only on its listed targets. Keep every blue dashed hinge attached and cut every red internal slit. Flat layouts on different pages are alternatives; do not change cuts between targets of the same puzzle. Templates are scaled to fit the page, rather than printed at one common unit-edge size.

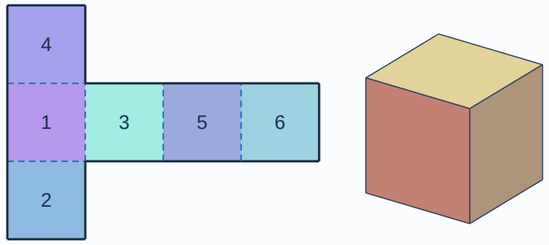

Use shape and geometry to solve the puzzle. The cool net palette and warm target palette are unrelated. Solutions later in the book use the net palette on each folded shape. Reflected spatial cube shapes are distinct targets when they are not related by rotation.

Play these same targets online: drag either view to rotate it; double-click a hinge and use the wheel, slider or key pair to fold. Open the folding game.

Puzzles - All eleven single-cube nets

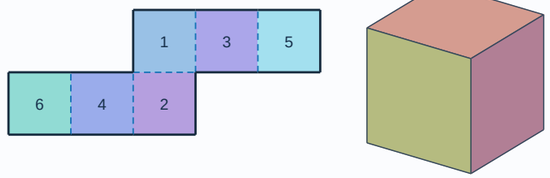

Each card pairs one fixed net with every target it makes in this collection.

Part II - Solutions

Matching colors reveal the panel correspondence.

1 cube 11 nets; 1 distinct targets represented / 1 tree shapes. All 1 planar tree shapes represented.

2 cubes 2 nets; 1 distinct targets represented / 1 tree shapes. All 1 planar tree shapes represented.

3 cubes 2 nets; 2 distinct targets represented / 2 tree shapes. All 2 planar tree shapes represented.

4 cubes 2 nets; 7 distinct targets represented / 7 tree shapes. All 4 planar tree shapes represented.

5 cubes 4 nets; 27 distinct targets represented / 27 tree shapes. All 11 planar tree shapes represented.

6 cubes 4 nets; 36 distinct targets represented / 138 tree shapes. All 27 planar tree shapes represented.

7 cubes 4 nets; 86 distinct targets represented / 822 tree shapes. All 83 planar tree shapes represented.

8 cubes 6 nets; 265 distinct targets represented / 5154 tree shapes. All 255 planar tree shapes represented.

Choose one net and work only on its listed targets. Keep every blue dashed hinge attached and cut every red internal slit. Flat layouts on different pages are alternatives; do not change cuts between targets of the same puzzle. Templates are scaled to fit the page, rather than printed at one common unit-edge size.

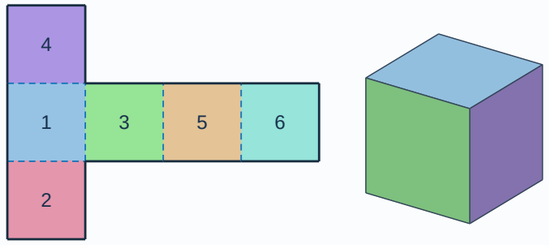

A panel keeps its color from the flat net to the folded target. Colors indicate one checked solution, but other valid panel assignments may exist. Reflected spatial cube shapes are distinct targets when they are not related by rotation.

Play these same targets online: drag either view to rotate it; double-click a hinge and use the wheel, slider or key pair to fold. Open the folding game.

Solutions - All eleven single-cube nets

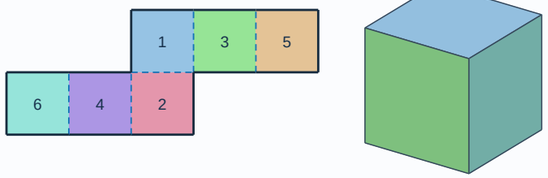

Each card pairs one fixed net with every target it makes in this collection.

Checks, coverage, and sources

The same checked game data generates every picture and target list in this book.

What is covered. All 35 included nets and all 796 net-target challenges appear in both Puzzles and Solutions. A challenge counts a net together with a target; targets shared between nets count more than once. Across the collection, every planar tree cluster through eight is represented. Spatial coverage at six/seven/eight is 36/138, 86/822 and 265/5154 tree shapes.

Same exterior area. All displayed clusters have a tree as their cube face-adjacency graph. Their boundary has 6n-2(n-1)=4n+2 square faces. For example, the 2-by-2 block of four cubes has fewer exterior panels and belongs to a different net size. It is not part of the seven-target 18-panel family.

Geometry checks. Integer cube coordinates determine each exterior square exactly. A bijection between all net panels and all exterior faces is checked, with shared hinge endpoints equal. The browser independently rebuilds each solution from signed hinge angles. Reflected cube shapes remain separate under proper rotations. Independent polyomino enumeration checks complete planar coverage through eight.

Larger examples. C8A and C8B cover 241 and 237 targets. Two extra nets supply the planar shapes that these miss. Selected spatial nets add further challenges. No largest possible set, universal eight-cube net or exhaustive common-net search is claimed.

Physical model. Rigid unit-square panels and ideal hinges are assumed. Internal slits are fixed. The computations establish final folded shapes, not a collision-free continuous motion. The game allows panels to pass through each other. Paper thickness, tabs and joint fabrication need separate design.

Classic examples. C4A transcribes the Knuth/Miller Cubigami7 outline in Aloupis et al., Figure 3, using a checked tree-hinge adaptation. C5A transcribes the earlier short paper's explicit 23-target net (page 2); C5B and C5C use the full paper's 22-target and 11-planar-target drawings. Our target counts are recomputed with the rotation/chirality convention above; no novelty is claimed for these published examples.

Primary sources. Aloupis et al., Common Unfoldings of Polyominoes and Polycubes (full paper); earlier short paper. The PDF embeds the exact exported game collection and a page manifest. Source photographs are not reproduced.
